High penetration of serum from hybrid nonwoven material using a double-layer structure

**Serum-soaked layer** (thicker, stretchable)
- Thick and富有弹性的 fiber layer

**Adhesive layer** (micro-fiber)
- Fine, high-density fiber layer

Serum is transferred from the serum-soaked layer to the adhesive layer by capillary action.

Point 1: **Lifts Up**
- High penetration of serum from hybrid nonwoven material using a double-layer structure
- Unique double-layer structure allows serum to渗透 effectively

Point 2: **High degree of adhesion**
- The surface layer comprises high-density microfibers
- Clings firmly to the skin

Point 3: **High serum release**
- Absorption test: Serum is delivered to the skin highly efficiently
- Start: 10 minutes later
